** For use with the Winegard Gateway.

First-time users must run a channel scan to receive maximum programming.

Ensure the antenna power supply (wall plate) is in the "ON" position and the green indicator light is illuminated.

A channel scan will find all available channels in your area, including any new channels and subchannels that have been added in your area since the last scan.

While the steps to perform a channel scan may vary between televisions or compatible devices, on the next page are some general guidelines to follow.

Power indicator light is green when power is on.

How to run a channel scan

- 1) Using the television remote, select "Menu" and then "Settings."
- 2) Select "Channel Setup."
- 3) Select "Antenna" or "Air," depending on your TV. Make sure you are not on "Cable."
- 4) Select "Channel Search" or "Channel Scan." Keep in mind that steps to perform a channel scan may vary. If the wording in your TV differs from the options shown, refer to your TV user manual for help.

To receive maximum programming, you have to run a channel scan after setting up the antenna. To keep your channel line-up up-to-date, it is a good idea to run a channel scan monthly, anytime a channel is lost, and anytime you change locations.

Running a channel scan is NOT the same as pressing Channel UP/DOWN on your remote.
